this game is the new go to lightsaber psycho fest the first work out ive gotten that didnt feel forced the hit and collision detection is just what ive been looking was able to effectively use about 7 different various double blade sword styles and it just felt right solid purchase here and its got leaderboards wich makes a huge difference when i make a purchase its almost the first thing i look for its the difference between a dev just wanting to sell copies of their game or do they want people spending a lot of time climbing ranks and logging hours. Great concept but poorly thought out. There is no way to tell the drones are incoming and from which way without looking this leaves you spinning around like a madman hoping to spot them in time. Really just making them make noise as they move would have solved this. Also when you hit them it doesn't feel like you are really hitting them needs more audilbe feedback and effects feedback.. The developers of this game have been very responsive to the community, quickly making improvements to sound and gameplay. It took me a few rounds to get the hang of it, but once I did I found myself gleefully slicing up drones and desperately deflecting lasers from the boss bots.. The developers of this game have been very responsive to the community, quickly making improvements to sound and gameplay. It took me a few rounds to get the hang of it, but once I did I found myself gleefully slicing up drones and desperately deflecting lasers from the boss bots.. I got this on sale for \$0.99 and that's about what I think it's worth.. Great concept but poorly thought out. There is no way to tell the drones are incoming and from which way without looking this leaves you spinning around like a madman hoping to spot them in time. Really just making them make noise as they move would have solved this. Also when you hit them it doesn't feel like you are really hitting them needs more audilbe feedback and effects feedback.
